

```

1
2  ✓ from multiprocessing import Process, Value
3      import time
4
5      # Function to modify shared memory
6  ✓ def increment(shared_num): 1 usage
7      print("Child process started")
8  ✓ for i in range(5):
9      time.sleep(1)
10     shared_num.value += 1
11     print(f"Child updated value: {shared_num.value}")
12
13     # Main process
14  ▶ ✓ if __name__ == "__main__":
15     # Shared memory variable (integer)
16     shared_num = Value( typecode_or_type: 'i', *args: 0)
17
18     # Create process
19     p = Process(target=increment, args=(shared_num,))
20     p.start()
21
22     # Parent process reading value
23  ✓ for i in range(5):
24     time.sleep(1)
25     print(f"Parent reads value: {shared_num.value}")
26
27     p.join()
28     💡 print("Final value:", shared_num.value)

```

```

Child process started
Parent reads value: 0
Child updated value: 1
Parent reads value: 1
Child updated value: 2
Parent reads value: 2
Child updated value: 3
Parent reads value: 3
Child updated value: 4
Parent reads value: 4
Child updated value: 5
Final value: 5

```
